Milan september 2014

The red in the background is the representation of the Turkish military (soldier) blood leaked all over the river bed! In the evening a moon and star appeared side by side (which is quite rare) and reflected on the pool of blood, hence the importance of the flag to the Republic of Turkey! The term 'Ay Yildiz' is just an expression of the symbolic representation of the moon and star!

The Current Turkish flag derived from the previous Ottoman empire flag with many changes made!

In addition the moon and star is not a significant symbol in Islam, to be honest there is NO significance of the moon and star in Islam at all!
